EDUCATION

ABV-IIITM Gwalior

Aug 2024 – April 2028

B.Tech, Computer Science and Engineering

Gwalior, IN

- *Relevant Coursework:* Computer Networks, Object Oriented Programming, Theory of Computation, Data Structures and Algorithms, Database Management System, Operating Systems

TECHNICAL SKILLS

AI Systems: LangGraph, LangChain, RAG, hybrid search, reranking, CRAG, Self-RAG, persistent memory, LangSmith, LLM evals
AI Infrastructure: FastAPI, PostgreSQL, CockroachDB, Redis, SQLite, Docker, Supabase, AWS (Bedrock, S3, EC2), vector databases
Machine Learning: Deep Learning, PyTorch, scikit-learn, XGBoost, embeddings, feature engineering
Software Engineering: Git, GitHub, REST APIs, OOP, Data Structures & Algorithms, Linux, Unit/Integration Testing, Agile
Languages & Product: Python, C++, SQL, TypeScript, React, Next.js, Tailwind CSS, system design, product design, UI/UX

EXPERIENCE

RYSE Technologies Pvt Ltd

Jul 2026 – Sep 2026

AI Systems Engineer Intern

Remote

- Engineered 5+ production-grade subagents using UV and LangGraph, implementing persistent memory layers for long-running task continuity.
- Architected a central orchestrator agent to route 10,000+ daily tasks across specialized subagents, reducing misrouted tasks by 33% and dispatch latency by 24%.
- Stack: Python, UV, Langchain, LangGraph, persistent/vector memory store, PostgreSQL.

SteelCareer

Jan 2026 – Mar 2026

Software Developer, Client Project

Remote

- Architected a Next.js and Supabase recruitment platform supporting 3 user roles with distinct workflows and role-based access control (RBAC).
- Automated hiring logistics via custom interview scheduling pipelines, reducing administrative overhead by 40% (saving ~15 hours/week).
- Deployed via Vercel with integrated real-time analytics, ensuring 99.9% availability for a seamless onboarding experience.

PROJECTS

RabbitHole | *LangGraph, Retrieval-Augmented Generation, LangSmith, Groq, Jina* [github](#)

- Architected a LangGraph system running dynamic 2–10 role-conditioned perspectives through iterative debates with human-in-the-loop review.
- Designed a structured state schema to replace prompt-only instructions, eliminating 3–4x perspective overrun, cutting latency ~50% (19.8s to 9.8s), and reducing input tokens by 70%.
- Instrumented pipeline observability via LangSmith across a hybrid search, CRAG, and Self-RAG pipeline, indexing 15.8k chunks into Jina.

PaperPlanes | *LangGraph, CockroachDB, AWS Bedrock, FastAPI* [github](#)

- Engineered a CockroachDB memory architecture with bi-temporal fact versioning and a consolidation write path, replacing naive vector memory.
- Designed a scoped retrieval strategy to surface relevant memory chunks, mitigating context rot while preserving multi-session continuity.
- Validated correctness under concurrent writes (SERIALIZABLE retries) and achieved sub-20ms retrieval at 10K+ notes via live integration tests.
- Stack: LangGraph + FastAPI, Amazon Bedrock (Nova Pro/Lite, Titan Embeddings), AWS (S3, EC2), React 19.

ACHIEVEMENTS

- **Winner, Egoistic Ideathon 2026** – International; Led a 4-person cross-functional team as technical lead, driving product direction.
- **LeetCode** – Solved 500+ Data Structures and Algorithms (DSA) problems.
- **2nd, Hacksagon 2024** – Hardware hackathon; co-ordinated with hardware members and owned the computation subsystem.
- **3rd, CockroachDB Hackathon** – International; Solo participation engineering a solution on a new database management system.

LEADERSHIP & COMMUNITY

- **SGM Social Initiative** (Executive) – Teaching math, English, and life skills to underprivileged children every week.
- **Infotsav '24** (Event Management) – Ran logistics for ABV-IIITM Gwalior's 1000+ attendee annual fest.
- **Uthaa Journalism Club** (Member) – Editorial writing and storytelling for institute journalism.
